Cut Feed. The question is often asked witether much is gained by cutting up hay staw, for, to feed neat stock. Something depends on circumstances. If your hay is of the first quality, your cattle will eat the whole without cutting, and save you the labor. But if your fodder is mostly poor, or if it has been injured in mking, you will do well to cut it short, and mix somathing with it to make it more palamble?
